It seems my traditional April 1 "Easter Egg" may not work as planned. Foiled by technology. The 30 or so who get the paper copy hopefully will get a chuckle. The rest will have to visualize it.

Art Thieme started the tradition of Easter Eggs in an April Newsletter from the mid 80's. He ran a reprint of a story from Soaring magazine 1988 (the original Easter Egg) about a new strain of termites that were eating the fiberglass tails of sailplanes. They were called Fibermites. Remember that epidemic of bugs? ;-)

I'm not sure if Editors other than Bob Nelligan-Barrett have continued that tradition. I haven't read that far in the newsletters yet. Do you remember any of Bob's past Easter Egg's?

TODD SPATH AND THE FP-101

Todd Spath shows how it looks in 3 dimensions.

I finally made it over to Todd Spath's shop with my camera and recorder. The previous two trips were prompted by Newsletter business. When so, I got a Cook's tour of his airplane works then, as well as a good briefing on his computer programming efforts too. But that's another story which I hear, will be told at the April meeting.

As you can see, Todd couldn't resist the urge to see the fuselage in 3D as soon as possible and had just set up the two body sides to get a look. All of the ribs and spars are fabricated, tail parts assembled, and the fuselage fabrication is moving along well. All of these will still go through the miller door, but he'll soon have to move out to continue with the assembly work.

Todd's background makes him a natural for building a flying machine. He says, "I grew up with street rods. During high school my aviation class teacher was building a Baby Great Lakes

(continued on pg. 3)

If you look back over the past Historical Supplements, you see the development of personal computer page layout, with the latest variation of our logo, a scan of an Falconar F-11, and a list of officers with familiar and not familiar names. Hugh Jones was good about getting in-depth interviews with builders. The cover story of Todd Spath's FP-101 continues inside with two full pages of text and photos.

Adult Content Warning Centerfold ahead

Do not turn the page if you can't handle beauty in all its forms. You have been warned!

Not what you expected, eh?

This is the first centerfold in the Newsletter, published in August 1985. The Flyer didn't come along for many years yet. The image was just as blurry then as it is now. With the compact version of the newsletter like this one, this WAS a centerfold across two pages, as here. Can you recognize any of these folks from 33 years ago? Can you find YOURSELF? Hugh Jones, Editor at the time, also created the "Who's Who?" diagram on the next page.
